

# Lab 2: Exploration by visualization: the streaming movies dataset

MinJae Jo

‘2025-09-12

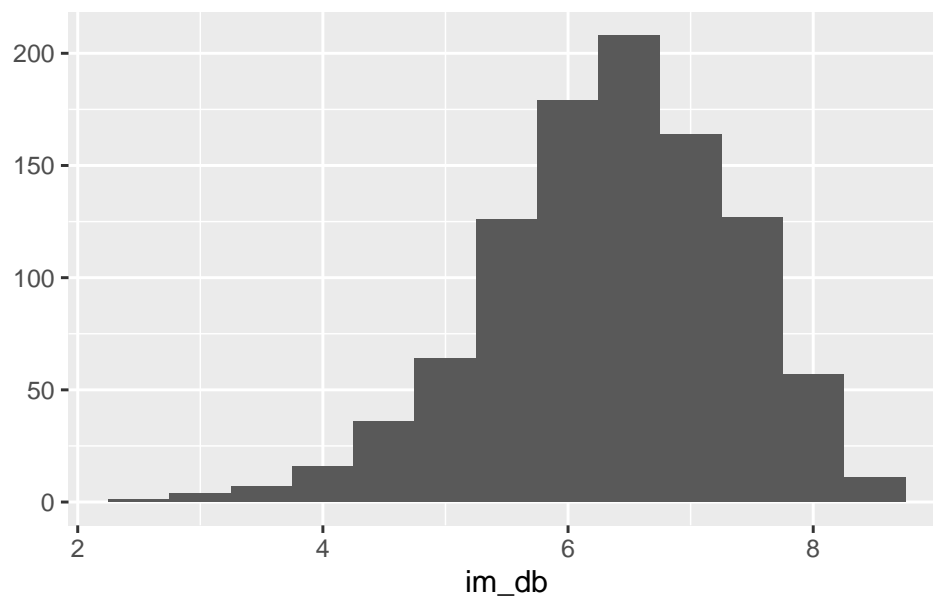

---

## Visualization by example

### Exercise 1

```
library(ggplot2)
qplot(x = im_db, binwidth = 0.5, data = streaming)
```

```
## Warning: ‘qplot()’ was deprecated in ggplot2 3.4.0.
## This warning is displayed once every 8 hours.
## Call ‘lifecycle::last_lifecycle_warnings()’ to see where this warning was
## generated.
```

## Exercise 2

```
library(ggplot2)

qplot(
  x = im_db,
  binwidth = 0.5,
  fill = main_language,
  data = streaming
)
```

## Exercise 3

Foreign films look slightly higher on average, which is a natural phenomenon as only popular or well-received films are usually streamed.

## Exercise 4

```
library(ggplot2)

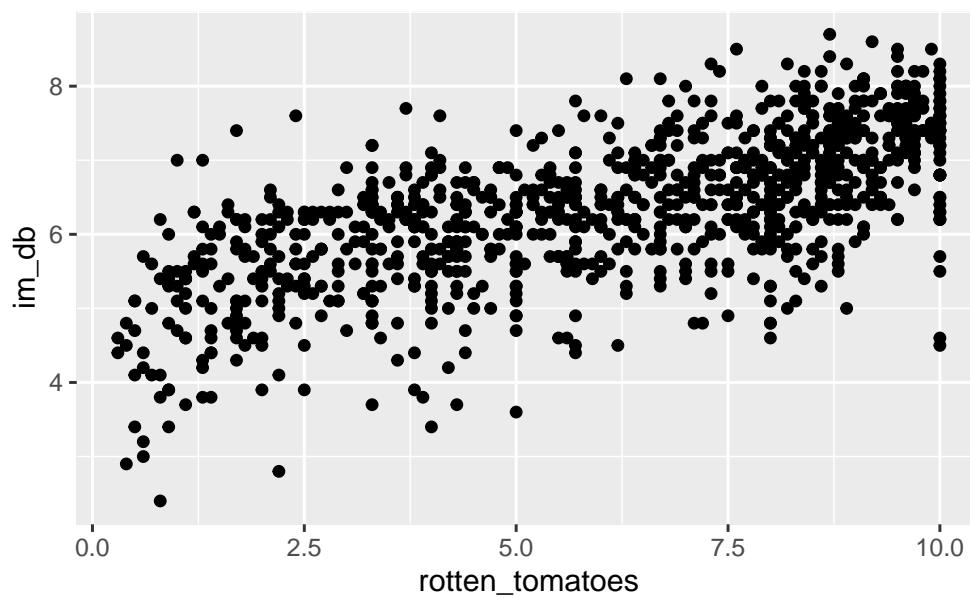

qplot(
  x = im_db,
  binwidth = 0.5,
  facets = ~ age,
  data = streaming
)
```

### Exercise 5

```
library(ggplot2)

qplot(
  x = rotten_tomatoes,
  y = im_db,
  data = streaming
)
```

## Exercise 6

```
library(ggplot2)

qplot(
  x = rotten_tomatoes,
  y = im_db,
  color = main_language,
  data = streaming
)
```

## Exercise 7

## Exercise 8

## Exercise 9
